

Technidyne Optical Seminar at Sappi in Lanaken, Belgium

On November 9th and 10th Technidyne presented Optical Properties of Paper Seminars at the Sappi Mill in Lanaken, Belgium. Personnel from both the Sappi Lanaken and Sappi Maastricht mills were in attendance. These sessions, which normally take a full day, were compressed into consecutive mornings in order to accommodate the work schedules of the participants. On both days there were many questions from the participants and good discussions about how these properties affect the production at Sappi.

Technidyne has previously held an Optical Properties of Paper Seminar at Sappi Maastricht and also at the Sappi Technology Centre in Pretoria, South Africa. Technidyne is committed to providing the best possible instrumentation and to giving back knowledge and experience to the pulp and paper industry as a whole. Certificates will be issued for all the people who attended to acknowledge their participation and to recognize their achievement in attending this seminar.

Thanks to all who participated and to those who helped organize this event. Below you can see pictures from both days' sessions.
